Chapter 1

Deploying to GitHub Pages

To deploy this Quarto website to GitHub Pages:

1. Create a GitHub repository and push this project to it.
2. In your terminal, ensure you have committed all changes.
3. Run the following command:

```
quarto publish gh-pages
```

4. Quarto will build the site, create a `gh-pages` branch, and push the static assets.
5. In your GitHub repository settings, ensure Pages is set to deploy from the `gh-pages` branch.
